OIL INDIA LIMITED - DAILY DRILLING REPORT (DDR #28)

SYNTHETIC OPERATIONAL DOCUMENT - OIL INDIA LIMITED (SIH26121)

WELL: Baghjan-03 (UWI: OIL-BGH-03)
CURRENT DEPTH: 3,425 m MD / 3,410 m TVD | HOLE SIZE: 8-1/2'
FORMATION: Barail Coal-Shale Sequence | MUD WEIGHT: 10.3 ppg

CRITICAL INCIDENT: HIGH-PRESSURE GAS KICK AT 3,420 m MD
During drilling break (ROP 6 to 32 m/hr), flow sensors registered 18 bbl pit gain.
Rig crew executed immediate hard shut-in on annular BOP.
Stabilized Pressures: SIDPP = 440 psi, SICP = 680 psi.

KILL OPERATION SUMMARY:
Calculated Kill Mud Weight: 11.4 ppg.
Executed Wait and Weight (Engineer's) Method. Displaced kick volume through choke manifold with zero surface casing damage.
Recommendation: Maintain minimum 11.2 - 11.5 ppg mud weight when drilling offset wells through Barail Coal-Shale in the Baghjan structure.
